

## Solar heating concepts

We think solar.

*Our headquarters in Teisnach,  
Germany*

*Josef Weindl and Bernhard Seiler,  
directors of soleg group AG*

### Our portfolio

- Distributor for solar heating technology
- Manufacturer of custom-made solar heating collectors
- Distributor for innovative wood fired heating technology
- Sonnenhaus/Solarhaus 50+: Solar Heating Concepts for 100% independence
- Individual planning service with investment guarantee for end customers
- Distributor for photovoltaic components
- EPC and turnkey provider of PV power plants
- Professional PV equipment and services

### Partners for you and the sun

„Energy from the Sun!“ - behind that lies a clear goal for soleg: We want to make a decisive contribution to the complete transition of the energy supply to renewable sources. Since 1994, we have been planning and distributing installations and systems for the use of solar energy in close cooperation with manufacturers, architects and installers.

**We exclusively work with innovative quality products from manufacturers who set the standard on the solar market.**

*On the basis of our many years of experience and the constant exchange of information with manufacturers, installers and end customers, you can expect experts and partners on par with you in each of our business areas.*

## Solar heating concepts

Soleg can offer the right innovative and economic solution for every house.

### Domestic Water Heating and Heating Support

The most efficient way of using solar energy is the direct transformation of sun rays into heat. The installation of a solar plant makes you independent from future energy shortages. Considerable energy savings are possible. soleg provides a wide range of high quality products. We also produce custom-made solar collectors. Large scale collectors as roof and facade collectors, so-called *Kranmodule* (=crane modules) of up to 12 m<sup>2</sup> space, are available as well.

### Sonnenhaus - Solarhaus 50+: Solar Heating Concepts for 100% independence

The sun house „lives“ off and with the sun: It has ideal thermal insulation, is made with natural materials, and is supplied with clean energy by the sun at no cost. In short, the concept fulfils all contemporary wishes for your home: It offers maximum living comfort with minimal energy input at an affordable price... Depending on the dimensions and the need for heat, the solar collector can supply up to 100 % of the heating and warm water. Low heating temperatures and optimized storage management help to improve the efficiency of the solar plant.

### Wood Fired Heating Technology

When burning wood only the same amount of CO<sub>2</sub> can be released which has been absorbed by the tree during the growth process. Therefore, sun and wood are the perfect couple. The combination of wood fired heating technology and a solar installation provides a clean heating solution and a cozy atmosphere.
